TRAVEL VISION

Travel Vision DDS
Automatic Dome Switching

The Travel Vision Dish Diversity System is specifically designed for maritime use to ensure optimum signal reception amidst obstacles such as bridges, masts, etc.

The system determines which satellite dish receives the strongest signal and passes it to the terminus or tuners. The switch is so rapid that it is undetectable by the user and their TV viewing is undisturbed.

The Travel Vision Dish Diversity System is a unique solution because it operates independently of the brand and type of the installed satellite antenna.

Key Features

- Eliminate Blind Spots cause by Blockage
- Fully Automatic Switching
- Two inputs for Dual Dome Installations
- 19” Rank Mountable
- Fully Configurable for all European TV Services
- 110-240v Input, 25 watt max

driven by simplicity
